INCIDENCE OF THE VENEREAL DISEASES IN U. S. ARMY TROOPS, JANUARY 1940 - JUNE 1947

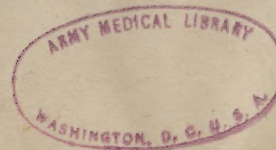

(Preliminary Data, Based on Periodic Summary Reports)

The tables comprising this booklet are based on the Statistical Health Report, a weekly summary of selected general morbidity and mortality data submitted to The Surgeon General by each Army hospital or dispensary responsible for providing medical service to troops in the United States, and, in the form of a "consolidated" report for the entire area under his commander's jurisdiction, by the Surgeon of each overseas area in which Army troops are serving. Such data provide information as to trends in morbidity of sufficient reliability for day-to-day operations. They must, however, be regarded as preliminary and subject to correction when data based on tabulations of individual medical records become available.

The tables include only venereal disease cases acquired in service, i.e., pre-induction incidence is excluded, (even when first symptoms appear soon after induction). "Readmissions" (cases previously reported) are also excluded. Cases treated as outpatients as well as patients excused from duty for treatment are included.

A single asterisk (*) indicates that data are not available although troops were in the area.

A blank space indicates that either no troops were present in the area considered during a period, or when it appears under a geographical subdivision of an area for which an entry has been made, no breakdown of the data for the subarea is available.

A double asterisk (**) indicates that five weeks' data rather than four, have entered into the calculations for a month. (Since the figures presented for each month are derived from weekly summaries, the calendar month in which the last day of the reporting period in each week falls is the month toward which the week's data are applied.)

A zero (0) indicates that troops were present but that no cases were reported.

The symbol $\frac{a}{/}$ indicates that data for at least one week during the month were not available, so that the rate for the month as a whole had to be estimated.
